

FUSE BOX LOCATIONS

E149218

When a fuse box lid is removed, take care to protect the box from moisture, and refit the lid at the earliest opportunity.

There are 5 separate fuse boxes fitted to the vehicle, each one containing fuses protecting a different group of circuits.

1. Left side engine compartment fuse box.

- Remove the left side under bonnet cover. See **145, UNDER BONNET COVERS - REMOVAL**.
- Press the clip to release the fuse box cover.

2. Right side engine compartment fuse box.

- Open the side cover and press the 2 clips to release the fuse box cover.

3. Passenger compartment fuse box, located in the passenger side foot-well.

- Pull back the floor mat/carpet to reveal the access panel.

- Pull up and remove the access panel to view the fuse box.

Note: Make sure the cover is correctly aligned to the vehicle before refitting.

4. Passenger compartment fuse box, located on the left side A pillar, below the fascia.

- Unclip the access panel to view the fuse box.

5. Luggage compartment fuse box. The fuse box is accessed by:

- (Coupe vehicles only). Folding back the Luggage compartment floor panel and removing the floor panel support block.
- Removing the left side Luggage compartment (battery) cover.
- Removing the luggage floor well trim.

Note: Refit these parts in the reverse order of removal.

CHANGING A FUSE

-  Always turn off the ignition system and the affected electrical circuit, before replacing a fuse.
-  Fit Jaguar approved replacement fuses of the same rating and type, or fuses of a matching specification.
-  If the replacement fuse blows after installation, the system should be checked by a Dealer/Authorised Repairer.

Note: *Jaguar recommend that owners do not remove or replace relays. It is recommended that you seek qualified assistance in the event of a relay failure.*

Spare fuses and the fuse removal tool are located in the passenger side footwell fuse box.

See **168, PASSENGER COMPARTMENT FUSE BOX**.

ENGINE COMPARTMENT FUSE BOX**Left side fuse box**
